

1

Rule book no longer contains event dates, refer to the website.

#### 5.1.1 – Fuels

No 'exotic' fuel is permitted. Commonly available pump gas, including E0, is okay. Unleaded race gas with an R+M/2 octane of 100 or below is permitted. Everything else is banned

#### 5.1.2 – Engines

Everything in the engine must be off-the-shelf and commonly available.

Valves must be the stock size, position, and stock material or heavier.

Power adders (N2O, forced induction, etc.) are banned.

If you think you're being clever with engine/chassis mods, you probably are. You're probably also going to be told to go home. This is an amateur series where new stock bikes should be very competitive.

#### 5.1.3 – Electric Bikes

Electric bikes are rated on a lb/hp method. Currently, everything available will run with 250's. Warning: this may change if it's obvious 250's have a crazy advantage

#### 6.2

If you miss the rider's meeting, don't expect to race.

#### 7.2.1

Helmets age out at 5 years, no flip-face helmets

#### 10.3

Wet races pay 1.5x points.

5.16 lb/hp – 250

4.54 lb/hp - 450
